

Typography

Display Font: Figtree	Mainly used for Headers and occasionally buttons.
Main Body: Roboto	The primary font used for all body text, captions and sometimes Header 5 or 6
Mono: Roboto Mono	Should be used sparingly for things like code blocks or tables where it is necessary to use a mono font. Can occasionally be used for Headings.

See type ramp for font sizes and weights.

Color Palette

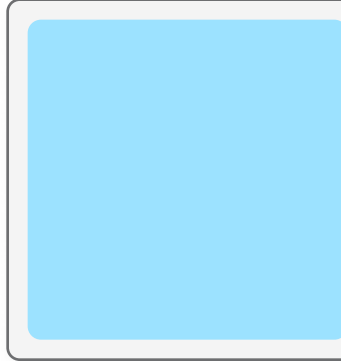

These are the main colors we’ve identified for use across the AmSC suite of tools. They were developed around a “light theme” for now, dark theme to come later. They can be broken down into a few categories.

Primary/Secondary Colors

These are the main colors to use for components that need color. Things like headers, buttons, visualizations, etc. They should be NOT be used for general purpose things like long paragraphs of text. The blues are the primary colors and the red is secondary and should be used sparingly as an accent

	name amsc / primary hex #004573
	name amsc / blue alt hex #00608C
	name amsc / secondary hex #A6111B

Here are some alternate blues/red that can be used in certain circumstances. They provide better contrast with white/black than the above colors so could be used as background for buttons or table headers. They should be used sparingly and to supplement the above colors.

	name amsc / dark blue hex #112a4d
	name color / core / blue / 200 hex #9CE2FF
	name color / core / red / 100 hex #FFBDC4ff

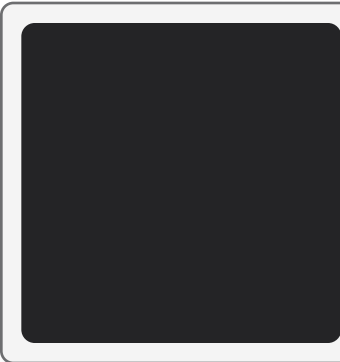

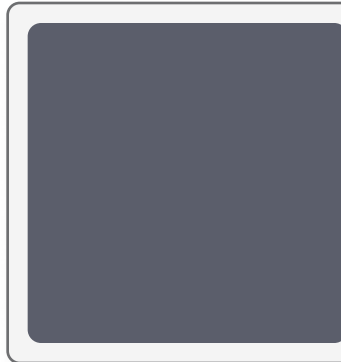

Surface Colors

The surface colors in order, background should be the furthest surface (lowest z-index). Surface-1 should be used for general sections/containers and surface-2 should be for most forward surfaces like cards, forms, etc.

	name amsc / light / background value #D2D3D7
	name amsc / light / surface-1 hex #E3E3E3
	name amsc / light / surface-2 hex #F2F2F2

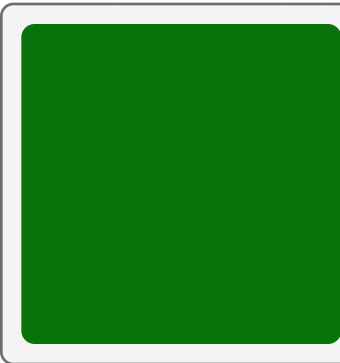

Copy Colors

We provide two colors, copy and copy-alt. Copy should be used for main body text and most standard text. Copy-alt can be used for text on disabled components and as an alternate header color.

	name amsc / light / copy hex #252526
	name amsc / light / copy-alt hex #5C5F6B

Alert Colors

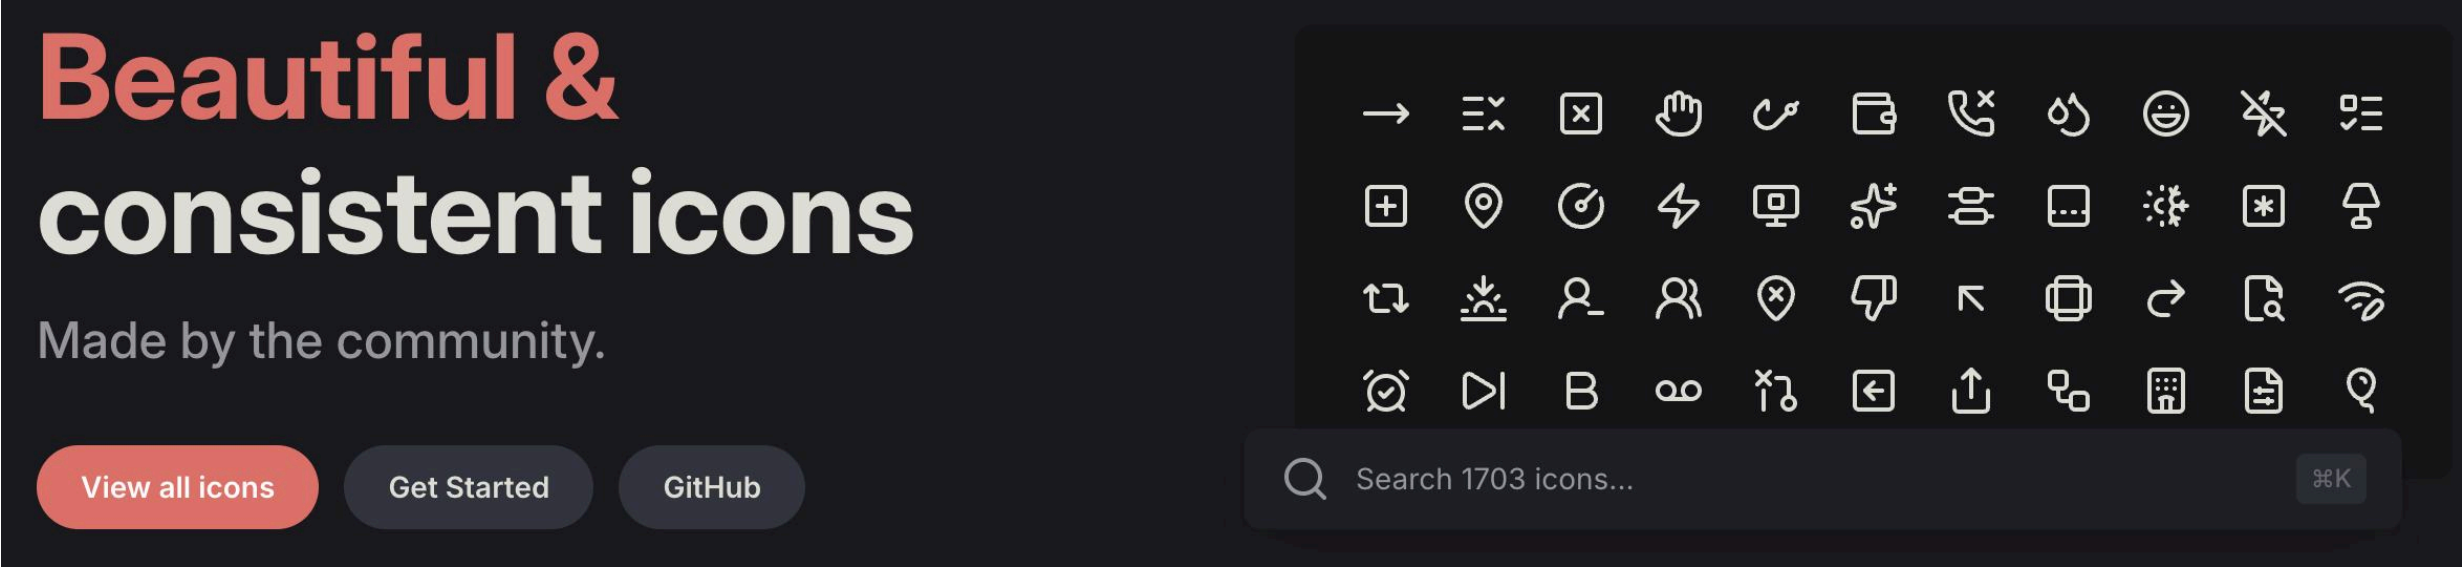

These colors can be used for success, warning & error alerts.

	name amsc / light / success hex #0B730B
	name amsc / light / warning hex #E6C500
	name amsc / light / error hex #D61200

See next page for color pairing examples

Iconography

Lucide Icons is an open source icon set containing 1700+ icons. You can easily grab png or svg versions of these from their website: lucide.dev to use in slides, apps, etc. They are also integrated into the design system for easy development. As much as possible, try to use an icon from this set. If you can't find one that fits your needs, try to find one that at least looks similar.

Logos

SVGs of logos can be found in the AmSC Slack, or
The white logos should only be used on solid dark backgrounds (such as black or dark blue).
Transparent logos should NOT be used over images. Make sure to use a background color in this case.

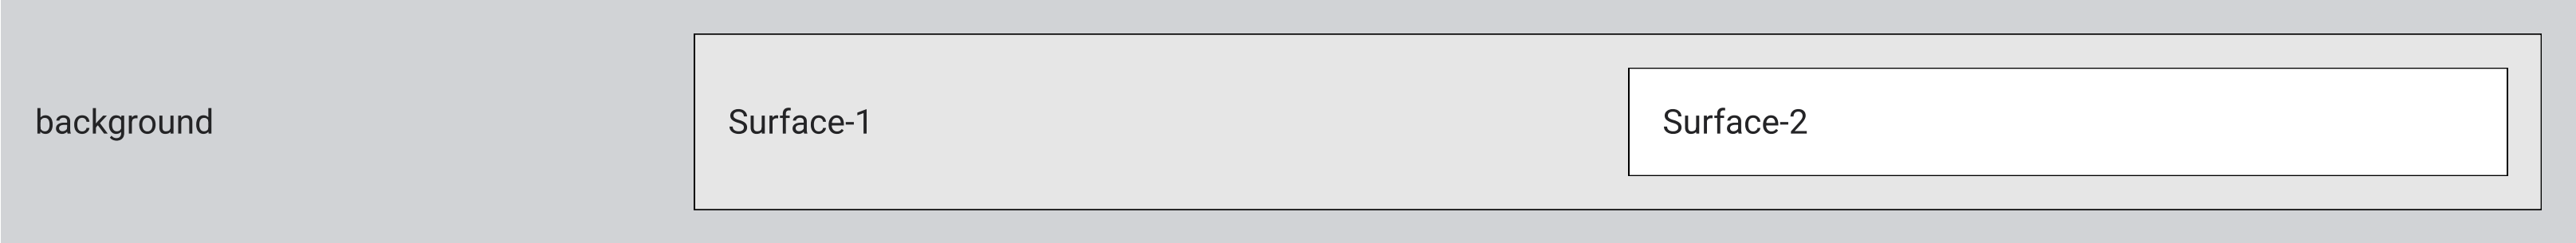

Color Pairings

Some examples of common Color Pairings

Primary Blue Header on Surface-2	Primary Blue Header on Surface-1
 Secondary (red) Icon with Primary Blue Header	Dark Blue Header on Light Blue
Body text (copy) on surface-2	Body text in copy-alt on surface-1 background.

An example of the surface colors all together

AmSC Design System

Everything in the style guide is also part of the [amsc-design-system](https://gitlab.com/amsc2/infrastructure-and-services/amsc-interfaces/amsc-design-system) repo in the AmSC gitlab.
